

## *Graffiti*

### HOW TO REMOVE GRAFFITI FROM VITRAGROUP PRODUCTS

#### INTRODUCTION

VITRATHANE® and VITRAFLON 700®, as the final finishes on VITRAGROUP products, exhibit excellent graffiti resistance due to their specialised formulations. The following procedures should be closely adhered to.

#### GRAFFITI REMOVAL

The graffiti should be removed as soon as possible after application. There are two reasons for this – first, it lifts easiest when still not cured, second, the "artist" is frustrated by early removal of his handiwork and will be less likely to repeat it.

Felt Tipped Marker Damage will lift quite easily using METHYLATED SPIRITS. Simply wipe over with saturated rag or paper tissue and repeat till all stain has disappeared.

Pressure Pack Sourced Paint will not respond to methylated spirits but will to MINERAL TURPENTINE. Again, continue to wipe over till all stain has disappeared.

Exotic Marker or Paint – it is possible that an exotic marker will be used to deface a VITRAGROUP product. If neither methylated spirits or mineral turps is effective, Graffiti Remover is available at most hardware stores and is very likely to be effective.

All graffiti can be cleaned off easily using "Graffiti Remover" available at most hardware stores.
